A stable atmosphere, in which high winds are absent, is also necessary for the formation of an air mass. Colder air masses are termed polar or arctic, while warmer air masses are deemed tropical. Weather fronts separate air masses with different density characteristics.

### **A Quiz About Fronts And Air Masses - ProProfs Quiz**

In a warm front, the replacement of cold air by warm air is gradual while in a cold front, the cold air replaces warm air more quickly. Explain how cyclones and anticyclones affect the weather. The air in the center of a cyclone rises, cools, and makes clouds and rain. The sinking air of an anticyclone brings dry, clear weather.

### **Air Masses and Fronts Flashcards | Quizlet**

In meteorology, a front is a place where two air masses of different temperature meet. A front exists nearly constantly between the temperate air and the polar one. You can see it more or less...

### **how air masses related to fronts? | Yahoo Answers**

Differences in air pressure will cause air masses to move. When a cold air mass moves into an area of warmer air, the denser cold air will force the warmer air to rise at the frontal boundary. This situation is called a cold front as seen in Figure 2. In the cold front, towering cumulus and cumulonimbus clouds will form.
