## **11 Digestive System Parts, Definition, Functions, and Organs**

Digestion is important for breaking down food into nutrients, which the body uses for energy, growth, and cell repair. The digestive system is not

# Download Ebook Functions Of The Digestive System

only uniquely constructed to perform its specialized function of turning food into the energy but also responsible for packaging the residue for waste disposal.

## **Functions of The Human Digestive System | Human Physiology**

The digestive system is a collection of organs that work together to digest and absorb food.

# Download Ebook Functions Of The Digestive System

Digestion is the process your body uses to break the foods you eat down into molecules your body can use for energy and nutrients. The following organs work together to help your body process the foods you eat. 1

## **Organs and Function of the Digestive System**

The primary function of the digestive system is

# Download Ebook Functions Of The Digestive System

to break down the food we eat into smaller parts so the body can use them to build and nourish cells and provide energy. The digestive system is a series of hollow organs joined in a long, twisting tube from the mouth to the anus. Inside this tube is a lining called the mucosa.

Elimination: The final process of the digestive system is the excretion of waste. Any substance that cannot be used by the body will ultimately be expelled from the body in a stool (poop). The anal sphincter carries the stool until it is ready to be expelled, then it is pushed out of the sphincter and goes through the anus to, assumingly, the toilet.

Human Digestive  
System Our body

needs food to provide  
it with energy,  
vitamins, and minerals.

However, in order use  
food, we must first  
break it down into  
substances that the  
various organs and  
cells in our body can  
use. This is the job of  
our digestive system.
