Zoonotic disease emergence is a complex process. A series of external factors, or drivers, provide conditions that allow for a select pathogen to expand and adapt to a new niche. The drivers for the most part are ecological, political, economic, and social forces operating at local, national, regional, and global levels. Regions where these factors are most densely aggregated, most highly ...

INTRODUCTION. Humans have sought to understand the relationship between population dynamics and the environment since the earliest times (1, 2), but it was Thomas Malthus' Essay on the Principle of Population in 1798 that is credited with launching the study of population and resources as a scientific topic of inquiry. Malthus' famous hypothesis was that population numbers tend to grow ...
